

Nanut Lertmahakiat

Healthcare Systems Architect

Medical Device Integration Specialist | Technical Project Leader

Bangkok, Thailand | (+66) 89-690-4334 | nanut.lertmahakiat@protonmail.com

Professional Summary

Healthcare Systems Architect with 18+ years of experience delivering software, integration, and mission-critical technology solutions across healthcare and industrial environments. Specialized in clinical workflow transformation, medical device integration, and healthcare interoperability. Combines hands-on technical expertise with project leadership to design and deliver practical solutions in complex healthcare environments with limited resources, budgets, and timelines.

Career Highlights

- 18+ years of experience delivering software, integration, and mission-critical technology solutions across healthcare and industrial environments.
- 8+ years specializing in healthcare technology, clinical information systems, and medical device integration.
- Led deployment, implementation, and support of anesthesia information management systems across leading hospitals in Thailand.
- Supported clinical environments spanning more than 60 operating rooms, working closely with physicians, nurses, biomedical engineers, and hospital IT teams.
- Worked with healthcare datasets exceeding 120,000 anesthesia cases, supporting clinical documentation, analytics, and operational workflows.
- Led interoperability initiatives involving HIS, LIS, Blood Bank systems, laboratory data, patient demographics, allergies, and clinical information exchange.
- Integrated multi-vendor healthcare technologies including patient monitors, anesthesia machines, gateways, and clinical information systems.
- Successfully delivered complex healthcare technology projects despite limited budgets, constrained resources, and aggressive implementation timelines.

Core Expertise

- Healthcare Systems Architecture
- HL7 & Healthcare Data Exchange
- Clinical-to-Technical Solution Translation
- Clinical Workflow Analysis & Optimization
- Solution Architecture & System Design
- Software Development & System Integration
- Medical Device Integration
- Technical Project Leadership
- Healthcare Technology Transformation
- Healthcare Interoperability
- Hospital Information System (HIS) Integration
- Laboratory Information System (LIS) Integration
- Blood Bank & Clinical Data Integration

Professional Experience

DRÄGER MEDICAL (THAILAND) LTD.

Clinical IT Specialist / Medical Device Integration Expert / Technical Project Leader 2017 – 2025

- Led implementation, deployment, and operational support of anesthesia information management systems (AIMS) across major hospitals in Thailand.
- Served as the primary technical liaison between clinicians, hospital IT departments, biomedical engineering teams, and software development teams to ensure successful project delivery.
- Designed and implemented integration solutions connecting patient monitors, anesthesia machines, and clinical systems to support real-time clinical documentation and workflow optimization.
- Led interoperability initiatives involving Hospital Information Systems (HIS), Laboratory Information Systems (LIS), Blood Bank systems, laboratory results, patient demographics, allergies, and clinical information exchange.
- Managed projects throughout the full lifecycle including requirements analysis, solution design, deployment planning, go-live activities, user training, and post-implementation support.

- Delivered healthcare technology solutions within constrained budgets, limited resources, and aggressive timelines while maintaining operational reliability in mission-critical clinical environments.
- Provided technical leadership and consulting expertise for hospitals seeking to improve clinical workflows, data accessibility, and healthcare system integration.

TTCL PUBLIC COMPANY LIMITED

IT Engineer / Software Developer / Project Implementation Specialist

2007 – 2017

- Designed, developed, and maintained software solutions supporting operations within industrial, power generation, and chemical plant environments.
- Participated in enterprise software implementation projects involving requirements analysis, system development, deployment, and operational support.
- Collaborated with multidisciplinary teams including engineers, operations personnel, vendors, and management stakeholders to deliver technology solutions aligned with business objectives.
- Developed strong foundations in software engineering, systems integration, project delivery, and mission-critical operational environments.
- Built practical experience delivering solutions within highly regulated industries where reliability, accuracy, and operational continuity were essential.

E D U C A T I O N

KING MONGKUT'S INSTITUTE OF TECHNOLOGY LADKRABANG (KMITL)

Bachelor of Science in Information Technology
